# Maintenance-Free Rechargeable Batteries

CF-12V1.3

#### **Specifications CF-6V1.3**

•	
Nominal Voltage	
Nominal Capacity at 77°F (25°C) Voltage readin	gs are per cell
20 Hour Rate (0.065 amps to 1.75 volts)	
10 Hour Rate (0.12 amps to 1.75 volts)	1.2 ampere hours
5 Hour Rate (0.19 amps to 1.75 volts)	
1 Hour Rate (0.82 amps to 1.60 volts)	0.82 ampere hours
1/2 Hour Rate (1.5 amps to 160 volts)	0.75 ampere hours
Max. Physical Size	
Length	3.82 inches (97mm)
Width	
Height (excluding terminals)	2.05 inches (52mm)
Height (including terminals)	2.28 inches (58mm)
Weight	0.68 lbs (0.31kg)
Energy Density	
(20 Hour Rate)	1.06 watt hrs/cu in
(20 Hour Rate)	11.47 watt hrs/lbs
Operating Temperature Range	
Discharge	60°F to +140°F (-51°C to +60°C)
Charge	
Recharging Methods:	,
Float Charging: Constant Potential Source of	6.8 to 6.9 volts continuously
riout onlying. Constant rotential Source of t	J.O to O. / Voits continuously.

Float Charging: Constant Potential Source of 6.8 to 6.9 volts continuously Routine Charging: Constant Potential Source of 7.25 to 7.45 volts with a charging current of 0.48 ampere maximum.

Terminal: Standard is tin plated brass, positive terminal is 0.030 stock x 0.187 wide, negative terminal is 0.030 stock by 0.187 wide, mates with Amp Faston series or equal.

Case Material: ABS

-	
Charge	

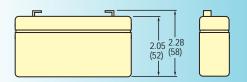

Float Charging: Constant Potential Source of 13.5 to 13.8 volts continuously. Routine Charging: Constant Potential Source of 14.4 to 15.0 volts with a charging current of 0.43 ampere maximum.

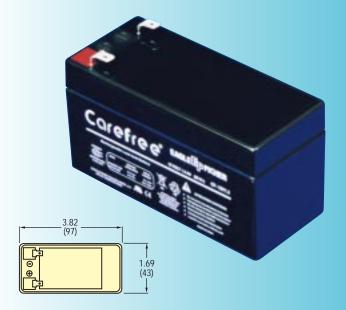

Terminal: Standard is tin plated brass, positive terminal is 0.030 stock x 0.187 wide, negative terminal is 0.030 stock by 0.187 wide, mates with Amp Faston series or equal.

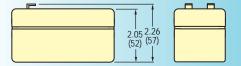

Case Material: ABS

Above data are average values which can be obtained within 3 charge/discharge cycles. These are not minimum values.

CF-6V1.3 CF-12V1.3

#### Maintenance-Free Rechargeable Batteries

#### **Charging vs Temperature**

The charging of Carefree batteries is best accomplished in a temperature range of 60°F to 90°F. Charging within this temperature range requires no temperature compensation. For applications over a wider temperature range, charging voltage must be changed as a function of temperature. (see chart at right)

#### **Capacity vs Temperature**

The efficiency of the lead-acid system decreases as the temperature decreases and increases as temperature increases from room temperature (70°) as illustrated. These four curves shown are based on discharges at the 20 hour, 5 hour, 11/2 hour and 1 hour rates.

#### **Self-Discharge Characteristics**

High temperature increases the rate of self-discharge of all battery systems but even in this respect, the lead-calcium battery is perhaps least affected. In general, the rate of self-discharge can be expected to double for each 20°F rise in temperature above 70°F.

#### **Battery Operating Conditions & Cautions**

Battery contains toxic material (lead) and corrosive fluid (sulfuric acid) • Charging can produce explosive gases • Do not charge in gas tight enclosures • Charge battery in a well-ventilated area away from sparks, flames or smoking • Use approved voltage controlled charger • Do not short-circuit battery terminals, as this can cause an explosion or fire • Keep batteries and chargers away from children • Charge battery as soon as possible after use • Do not store battery in discharged state • Do not puncture, disassemble, mutilate or incinerate • MUST BE RECYCLED OR DISPOSED OF PROPERLY

#### **Installation Care**

All CAREFREE batteries are carefully assembled and with proper charging will provide excellent service. When placing the battery into service it must be inspected to make sure that the battery has not been damaged by rough handling. If the unit has been damaged, there is a possibility of a loss of a small amount of sulfuric acid electrolyte and possible corrosion of adjacent components. Any sulfuric acid can cause severe burns to the skin and eyes. If contact is made with a damaged battery, immediately wash the contacted area with water for at least 5 minutes. When installing the battery in equipment, ventilation must be provided. Toward the end of charge and under overcharge conditions, hydrogen and oxygen gas can be generated. If this gas is allowed to accumulate in the enclosure and a spark is introduced, an explosion could result.

The specifications on this sheet may be changed by Eagle-Picher Technologies, LLC, without notice.

## **CF-12V3**

## Maintenance-Free Rechargeable Batteries

#### **Specifications CF-12V3**

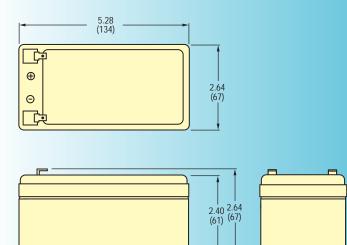

-
Nominal Voltage 12.00V
Nominal Capacity at 77°F (25°C) Voltage readings are per cell
20 Hour Rate
(0.16 amps to 1.75 volts) 3.20 ampere hours 10 Hour Rate
(0.3 amps to 1.75 volts) 3.00 ampere hours
5 Hour Rate
(0.51 amps to 1.75 volts) 2.55 ampere hours
1 Hour Rate
(2.17 amps to 1.60 volts) 2.17 ampere hours 1/2 Hour Rate
(3.15 amps to 1.60 volts) 1.58 ampere hours
Max. Physical Size:
Length
Width
Height (excluding terminals) 2.40 inches (61mm)
Height (including terminals) 2.64 inches (67mm)
Weight
Energy Density
(20 Hour Rate) 1.09 watt hrs/cu in
(20 Hour Rate)14.81 watt hrs/lbs
Operating Temperature Range:
Discharge60°F to +140°F (-51°C to +60°C)
Charge 0°F to +120°F (-18°C to +49°C)
Recharging Methods:

Float Charging: Constant Potential Source of 13.6 to 13.8 volts continuously.

Routine Charging: Constant Potential Source of 14.5 to 14.9 volts with a charging current of 1.28 ampere maximum.

Terminal: Standard is tin plated brass, positive terminal is 0.030 stock x 0.187 wide, negative terminal is 0.030 stock by 0.187 wide, mates with Amp Faston series or equal.

#### CF-12V3

#### Maintenance-Free Rechargeable Batteries

#### **Charging vs Temperature**

The charging of Carefree batteries is best accomplished in a temperature range of 60°F to 90°F. Charging within this temperature range requires no temperature compensation. For applications over a wider temperature range, charging voltage must be changed as a function of temperature. (see chart at right)

#### **Capacity vs Temperature**

The efficiency of the lead-acid system decreases as the temperature decreases and increases as temperature increases from room temperature (70°) as illustrated. These four curves shown are based on discharges at the 20 hour, 5 hour, 11/2 hour and 1 hour rates.

#### **Self-Discharge Characteristics**

High temperature increases the rate of self-discharge of all battery systems but even in this respect, the lead-calcium battery is perhaps least affected. In general, the rate of self-discharge can be expected to double for each 20°F rise in temperature above 70°F.

#### **Battery Operating Conditions & Cautions**

Battery contains toxic material (lead) and corrosive fluid (sulfuric acid) • Charging can produce explosive gases • Do not charge in gas tight enclosures • Charge battery in a well-ventilated area away from sparks, flames or smoking • Use approved voltage controlled charger • Do not short-circuit battery terminals, as this can cause an explosion or fire • Keep batteries and chargers away from children • Charge battery as soon as possible after use • Do not store battery in discharged state • Do not puncture, disassemble, mutilate or incinerate • MUST BE RECYCLED OR DISPOSED OF PROPERLY

#### **Installation Care**

All CAREFREE batteries are carefully assembled and with proper charging will provide excellent service. When placing the battery into service it must be inspected to make sure that the battery has not been damaged by rough handling. If the unit has been damaged, there is a possibility of a loss of a small amount of sulfuric acid electrolyte and possible corrosion of adjacent components. Any sulfuric acid can cause severe burns to the skin and eyes. If contact is made with a damaged battery, immediately wash the contacted area with water for at least 5 minutes. When installing the battery in equipment, ventilation must be provided. Toward the end of charge and under overcharge conditions, hydrogen and oxygen gas can be generated. If this gas is allowed to accumulate in the enclosure and a spark is introduced, an explosion could result.

The specifications on this sheet may be changed by Eagle-Picher Technologies, LLC, without notice.

### Maintenance-Free Rechargeable Batteries

#### **Specifications CF-6V4.5**

Nominal Voltage	6V
Nominal Capacity at 77°F (25°C) Voltage readings are	
20 Hour Rate (0.225 amps to 1.75 volts)	
10 Hour Rate (0.42 amps to 1.75 volts)	
5 Hour Rate (0.72 amps to 1.75 volts)	3.6 ampere hours
1 Hour Rate (3.06 amps to 1.60 volts)	
1/2 Hour Rate (4.73 amps to 1.60 volts)	2.37 ampere hours
Max. Physical Size	
Length	2.76 inches (70mm)
Width	
Height (excluding terminals)	3.98 inches (101mm)
Height (including terminals)	
Weight	
Energy Density	
(20 Hour Rate)	1.33 watt hrs/cu in
(20 Hour Rate)	
Operating Temperature Range:	
Discharge60°F to	n +140°F (-51°C to +60°C)
Charge 0°F to	
3	0 1 120 1 (-10 6 10 747 6)
Recharging Methods:	
Float Charging: Constant Potential Source of 6.8 to	6.9 voits continuously.

Routine Charging: Constant Potential Source of 7.25 to 7.45 volts with a charging current of 1.6 ampere maximum.

Terminal: Standard is tin plated brass, positive terminal is 0.030 stock x 0.187 wide, negative terminal is 0.030 stock by 0.187 wide, mates with Amp Faston series or equal.

Case Material: ABS

### CF-12V7.2

### Maintenance-Free Rechargeable Batteries

#### **Specifications CF-12V7.2**

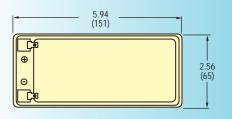

Nominal Voltage	12.00V
Nominal Capacity at 77°F (25°C) Voltage readings are per cell	
20 Hour Rate (0.36 amps to 1.75 volts)	7.20 ampere hours
10 Hour Rate (0.67 amps to 1.75 volts)	6.70 ampere hours
5 Hour Rate (1.22 amps to 1.75 volts)	6.10 ampere hours
1 Hour Rate (4.10 amps to 1.60 volts)	4.10 ampere hours
1/2 Hour Rate (7.56 amps to 1.60 volts)	3.78 ampere hours
Max. Physical Size:	
Length	5.94 inches (151mm)
Width	2.56 inches (65mm)
Height (excluding terminals)	3.74 inches (95mm)
Height (including terminals)	3.98 inches (101mm)
Weight	
Energy Density	
(20 Hour Rate)	1.54 watt hrs/cu in
(20 Hour Rate)	
Operating Temperature Range	
Discharge60°F to +	-140°F (-51°C to +60°C)

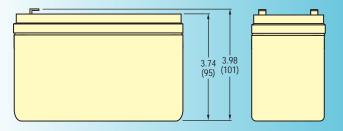

Float Charging: Constant Potential Source of 13.6 to 13.8 volts continuously.

Routine Charging: Constant Potential Source of 14.5 to 14.9 volts with a charging current of 2.8 ampere maximum.

Terminal: Standard is tin plated brass, positive terminal is 0.030 stock x 0.187 wide, negative terminal is 0.030 stock by 0.187 wide, mates with Amp Faston series or equal.

#### CF-12V7.2

#### Maintenance-Free Rechargeable Batteries

#### **Charging vs Temperature**

The charging of Carefree batteries is best accomplished in a temperature range of 60°F to 90°F. Charging within this temperature range requires no temperature compensation. For applications over a wider temperature range, charging voltage must be changed as a function of temperature. (see chart at right)

#### **Capacity vs Temperature**

The efficiency of the lead-acid system decreases as the temperature decreases and increases as temperature increases from room temperature (70°) as illustrated. These four curves shown are based on discharges at the 20 hour, 5 hour, 11/2 hour and 1 hour rates.

#### **Self-Discharge Characteristics**

High temperature increases the rate of self-discharge of all battery systems but even in this respect, the lead-calcium battery is perhaps least affected. In general, the rate of self-discharge can be expected to double for each 20°F rise in temperature above 70°F.

#### **Battery Operating Conditions & Cautions**

Battery contains toxic material (lead) and corrosive fluid (sulfuric acid) • Charging can produce explosive gases • Do not charge in gas tight enclosures • Charge battery in a well-ventilated area away from sparks, flames or smoking • Use approved voltage controlled charger • Do not short-circuit battery terminals, as this can cause an explosion or fire • Keep batteries and chargers away from children • Charge battery as soon as possible after use • Do not store battery in discharged state • Do not puncture, disassemble, mutilate or incinerate • MUST BE RECYCLED OR DISPOSED OF PROPERLY

#### **Installation Care**

All CAREFREE batteries are carefully assembled and with proper charging will provide excellent service. When placing the battery into service it must be inspected to make sure that the battery has not been damaged by rough handling. If the unit has been damaged, there is a possibility of a loss of a small amount of sulfuric acid electrolyte and possible corrosion of adjacent components. Any sulfuric acid can cause severe burns to the skin and eyes. If contact is made with a damaged battery, immediately wash the contacted area with water for at least 5 minutes. When installing the battery in equipment, ventilation must be provided. Toward the end of charge and under overcharge conditions, hydrogen and oxygen gas can be generated. If this gas is allowed to accumulate in the enclosure and a spark is introduced, an explosion could result.

The specifications on this sheet may be changed by Eagle-Picher Technologies, LLC, without notice.

### CF-12V17

## Maintenance-Free Rechargeable Batteries

#### **Specifications CF-12V17**

Nominal Voltage12.00V
Nominal Capacity at 77°F (25°C) Voltage readings are per cell
20 Hour Rate (0.85 amps to 1.75 volts) 17.00 ampere hours
10 Hour Rate (1.58 amps to 1.75 volts) 15.80 ampere hours
5 Hour Rate (2.72 amps to 1.75 volts) 13.60 ampere hours 1 Hour Rate
(11.6 amps to 1.60 volts) 11.60 ampere hours
(17.85 amps to 1.60 volts) 8.93 ampere hours
Max. Physical Size
Length 7.12 inches (181mm)
Width 3.03 inches (77mm)
Height (excluding terminals) 6.57 inches (167mm)
Height (including terminals) 6.57 inches (167mm)
Weight 12.55 lbs (5.7kg)
Energy Density
(20 Hour Rate) 1.49 watt hrs/cu in
(20 Hour Rate) 15.45 watt hrs/lbs
Operating Temperature Range
Discharge60°F to +140°F (-51°C to +60°C)
Charge 0°F to +120°F (-18°C to +49°C)

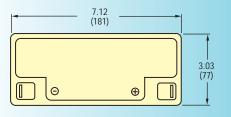

#### **Recharging Methods:**

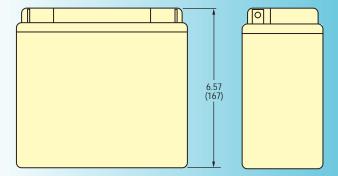

Float Charging: Constant Potential Source of 13.6 to 13.8 volts continuously.

Routine Charging: Constant Potential Source of 14.5 to 14.6 volts with a charging current of 6.8 ampere maximum.

Terminal: Standard is tin plated brass, bolt and nut.

CF-12V17

#### Maintenance-Free Rechargeable Batteries

#### **Charging vs Temperature**

The charging of Carefree batteries is best accomplished in a temperature range of 60°F to 90°F. Charging within this temperature range requires no temperature compensation. For applications over a wider temperature range, charging voltage must be changed as a function of temperature. (see chart at right)

#### **Capacity vs Temperature**

The efficiency of the lead-acid system decreases as the temperature decreases and increases as temperature increases from room temperature (70°) as illustrated. These four curves shown are based on discharges at the 20 hour, 5 hour, 11/2 hour and 1 hour rates.

#### **Self-Discharge Characteristics**

High temperature increases the rate of self-discharge of all battery systems but even in this respect, the lead-calcium battery is perhaps least affected. In general, the rate of self-discharge can be expected to double for each 20°F rise in temperature above 70°F.

#### **Battery Operating Conditions & Cautions**

Battery contains toxic material (lead) and corrosive fluid (sulfuric acid) • Charging can produce explosive gases • Do not charge in gas tight enclosures • Charge battery in a well-ventilated area away from sparks, flames or smoking • Use approved voltage controlled charger • Do not short-circuit battery terminals, as this can cause an explosion or fire • Keep batteries and chargers away from children • Charge battery as soon as possible after use • Do not store battery in discharged state • Do not puncture, disassemble, mutilate or incinerate • MUST BE RECYCLED OR DISPOSED OF PROPERLY

#### **Installation Care**

All CAREFREE batteries are carefully assembled and with proper charging will provide excellent service. When placing the battery into service it must be inspected to make sure that the battery has not been damaged by rough handling. If the unit has been damaged, there is a possibility of a loss of a small amount of sulfuric acid electrolyte and possible corrosion of adjacent components. Any sulfuric acid can cause severe burns to the skin and eyes. If contact is made with a damaged battery, immediately wash the contacted area with water for at least 5 minutes. When installing the battery in equipment, ventilation must be provided. Toward the end of charge and under overcharge conditions, hydrogen and oxygen gas can be generated. If this gas is allowed to accumulate in the enclosure and a spark is introduced, an explosion could result.

The specifications on this sheet may be changed by Eagle-Picher Technologies, LLC, without notice.

## CF-12V26

## Maintenance-Free Rechargeable Batteries

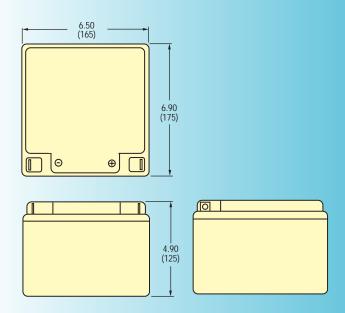

#### **Specifications CF-12V26**

Nominal Voltage12V	!
Nominal Capacity at 77°F (25°C) Voltage readings are per cell	
20 Hour Rate	
(1.30 amps to 1.75 volts) 26 ampere hours	,
10 Hour Rate (2.42 amps to 1.75 volts) 24.2 ampere hours	•
5 Hour Rate	
(4.42 amps to 1.75 volts) 22.1 ampere hours 1 Hour Rate	
(15.1 amps to 1.60 volts) 15.1 ampere hours	
1/2 Hour Rate	
(25 amps to 1.60 volts) 12.5 ampere hours	,
Max. Physical Size	
Length 6.50 inches (166mm)	
Width 6.90 inches (175mm)	
Height (excluding terminals) 4.90 inches (125mm)	
Height (including terminals) 4.90 inches (125mm)	
Weight	
Energy Density	
(20 Hour Rate) 1.42 watt hrs/cu in	
(20 Hour Rate) 16.25 watt hrs/lbs	
Operating Temperature Range	
Discharge60°F to +140°F (-51°C to +60°C)	
Charge 0°F to +120°F (-18°C to +49°C)	
Recharging Methods: Float Charging: Constant Potential Source of 13.6 to 13.8 volts continuously.	
Routine Charging: Constant Potential Source of 14.5 to	

Routine Charging: Constant Potential Source of 14.5 to 14.9 volts with a charging current of 9.6 ampere maximum.

Terminal: Standard is tin plated brass, bolt and nut.

CF-12V26

#### Maintenance-Free Rechargeable Batteries

#### **Charging vs Temperature**

The charging of Carefree batteries is best accomplished in a temperature range of 60°F to 90°F. Charging within this temperature range requires no temperature compensation. For applications over a wider temperature range, charging voltage must be changed as a function of temperature. (see chart at right)

#### **Capacity vs Temperature**

The efficiency of the lead-acid system decreases as the temperature decreases and increases as temperature increases from room temperature (70°) as illustrated. These four curves shown are based on discharges at the 20 hour, 5 hour, 11/2 hour and 1 hour rates.

#### **Self-Discharge Characteristics**

High temperature increases the rate of self-discharge of all battery systems but even in this respect, the lead-calcium battery is perhaps least affected. In general, the rate of self-discharge can be expected to double for each 20°F rise in temperature above 70°F.

#### **Battery Operating Conditions & Cautions**

Battery contains toxic material (lead) and corrosive fluid (sulfuric acid) • Charging can produce explosive gases • Do not charge in gas tight enclosures • Charge battery in a well-ventilated area away from sparks, flames or smoking • Use approved voltage controlled charger • Do not short-circuit battery terminals, as this can cause an explosion or fire • Keep batteries and chargers away from children • Charge battery as soon as possible after use • Do not store battery in discharged state • Do not puncture, disassemble, mutilate or incinerate • MUST BE RECYCLED OR DISPOSED OF PROPERLY

#### **Installation Care**

All CAREFREE batteries are carefully assembled and with proper charging will provide excellent service. When placing the battery into service it must be inspected to make sure that the battery has not been damaged by rough handling. If the unit has been damaged, there is a possibility of a loss of a small amount of sulfuric acid electrolyte and possible corrosion of adjacent components. Any sulfuric acid can cause severe burns to the skin and eyes. If contact is made with a damaged battery, immediately wash the contacted area with water for at least 5 minutes. When installing the battery in equipment, ventilation must be provided. Toward the end of charge and under overcharge conditions, hydrogen and oxygen gas can be generated. If this gas is allowed to accumulate in the enclosure and a spark is introduced, an explosion could result.

The specifications on this sheet may be changed by Eagle-Picher Technologies, LLC, without notice.

#### Operating Temperature Range

Discharge ...... -60°F to +165°F (-50°C to +74°C) Charge ...... 0°F to +120°F (-18°C to +49°C)

#### **Recharging Methods:**

Float Charging: Constant Potential Source of 13.7 to 13.9 volts continuously.

Routine Charging: Constant Potential Source of 14.7 to 15.1 volts with a charging current of 10.0 ampere maximum.

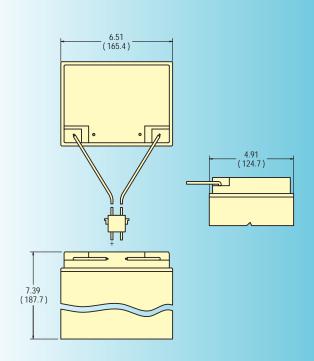

Terminal: Cable assembly with TEW-105 (#12 AWG) tinned copper wire; orange - negative, brown - positive; 7.12 inches long from edge of battery to end of connector; AMP connector housing 770017-1 and 2 AMP sockets 770004-3

Case Material: Polycarbonate Flame Class: UL94 V-0 exceeds oxygen index 28

Float Life Expectancy: 8+ years at 77°F (25°C)

Two Year Full Warranty at average battery temperature of 77°F (25°C) or less
